Neutral components

Home page (customer focused)

Log-in and Sign-up navigation (Customer or Business?)

Product Pages

Customer components

Cart and Checkout page

Customer Profile

Business components

Business Account

Publishing form (for businesses)

Customer Scenario: Filter products by category, brand, and price range

- Given the customer is on the product search page
- When they apply filters for category, brand, and a specific price range
- Then the search results update to display only products matching all selected criteria
- And the applied filter tags are visibly displayed on the page

Customer Scenario: Viewing comprehensive product details

- Given the customer is on a product details page
- When the page finishes loading
- Then the customer should see the detailed product description
- And the ingredients and size information should be visible
- And the customer rating and user reviews should be displayed

Customer Scenario: As a customer, I want to add items to a shopping cart and complete a secure checkout

- Scenario: Add an item to the shopping cart
- Given the customer is viewing a product page
- When they select a quantity and click "Add to Cart"
- Then the item should be added to their shopping cart
- And the cart icon should update to show the correct total item count

- Scenario: Complete a secure checkout
- Given the customer has at least one item in their shopping cart
- When they proceed to checkout, enter valid shipping and payment details, and confirm the order
- Then the payment should be processed securely
- And the customer should see an order confirmation screen with a unique order ID

Customer Scenario: Write a review after a purchase

- Given I have purchased and received an item
- When I submit a review for that item
- Then the review should be saved and visible to other customers

Provider Scenario: <Successfully register a business profile>

- Given <I am not registered>
- When <I submit my information and create a business account>
- Then <Customers can view my account>
- And <I can sell my inventory>

Provider Scenario: <Respond to reviews>

- Given <I am registered in a business account>
- When <I log in>
- Then <I should be able to see 'recent reviews' and respond to them>
